

Style: Active Asset Allocation | Inception: August 2019 | Risk Profile: Moderate

Strategy Description

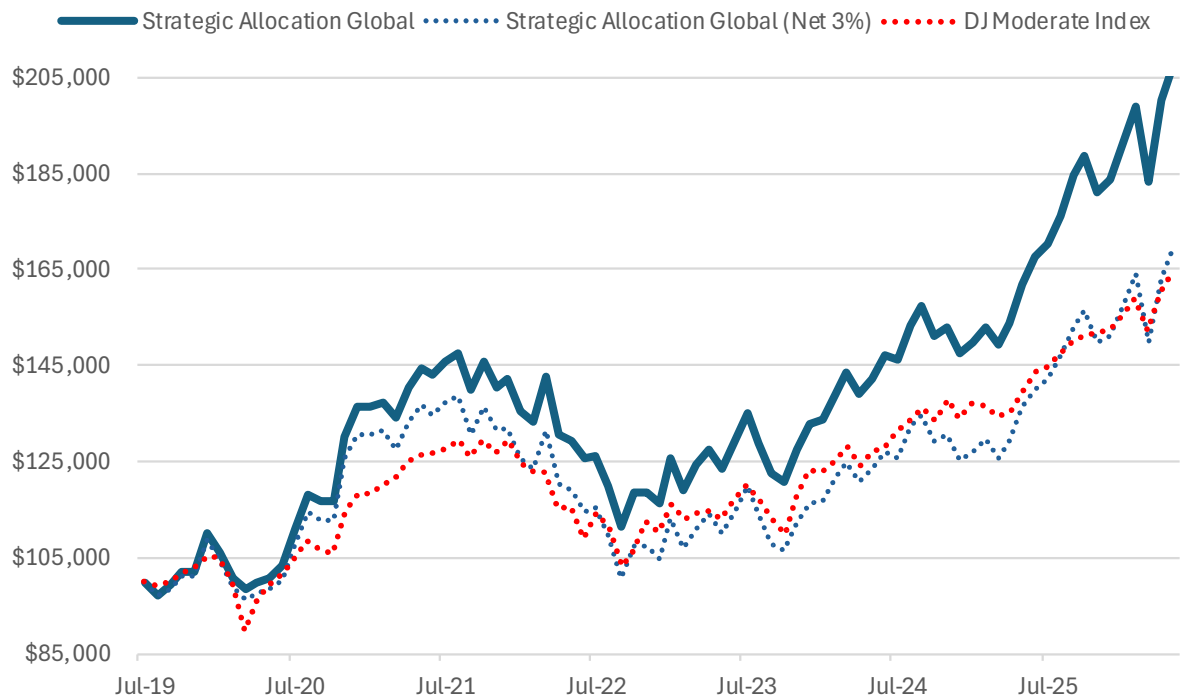

Strategic Allocation Global provides active management utilizing a universe of global funds. Drawing from years of academic and market research, the strategy embraces the concept of momentum investing which ranks available funds based on recent performance. It invests in the highest ranked funds under the premise that they will continue to be strong performers for the next period.

The universe of funds is reviewed every month and positions are held for at least 30 days. Strategic Allocation Global seeks to overweight those segments of the global market showing positive relative strength, and avoids those which are underperforming. The strategy has the ability to shift to defensive holdings if no better options are available. Global funds considered include country specific and regional-based funds. In addition to international funds, the strategy also includes a US-based investment option in the available universe.

Strategy Highlights

- Global funds considered include country-specific, regional, emerging, and developed markets
- reviewed every month for top performers, and each position is held at least 30 days
- Holds three equally weighted funds from different regions of the world
- Maintains the ability to respond to adverse market conditions by incorporating defensive positions

Hypothetical Growth of \$100,000 Inception Date: August 2019

Performance

	YTD	1-Yr	3-Yr	5-Yr	Since Inception	Cumulative Since Incep.
SA Global	12.5%	27.6%	18.8%	7.5%	11.2%	106.7%
SA Global (Net 3%)	11.6%	23.8%	15.3%	4.3%	8.0%	68.8%
Dow Jones Moderate Index	14.2%	32.5%	20.3%	8.6%	10.5%	64.7%

Annualized Returns through May 31, 2026

Performance results shown are both gross of fees and net of 3% fees. The net of fee returns exceed Q3's maximum fee rate, as certain platform providers require a 3% fee rate to be used for client facing reports.

Reward Statistics

	SA Global	SA Global (Net 3%)	Dow Jones Moderate Index
Return	11.2%	8.0%	10.5%
Average Gain	3.6%	3.3%	4.0%
Up Deviation	8.6%	8.5%	9.2%
Alpha	4.3%	0.9%	-
Up Capture	80%	74%	-
Down Capture	65%	72%	-

Risk Statistics

	SA Global	SA Global (Net 3%)	Dow Jones Moderate Index
Std Deviation	14.3%	14.4%	16.5%
Down Deviation	7.1%	7.3%	11.3%
Max Drawdown	-24.5%	-27.3%	-27.9%
Average Loss	-3.5%	-3.8%	-3.8%
Sharpe Ratio	0.60	0.40	0.50
Beta	0.66	0.68	-

Since Inception, calculations based on monthly data. Sharpe Ratio and Alpha assume 2% as a risk-free rate.

Historical Drawdowns

Underlying Positioning

2022	-18.2%	-20.7%	-15.0%				

Performance through May 31, 2026 *partial year 2016

Disclosures

Performance results shown are both gross of fees and net of a 3% fee. Actual deducted fees will vary by platform. Fees of anything less than Q3's maximum rate may not reflect the impact that fees have on the compounding effect of returns. With the inclusion of fees, the actual return would be lower than the performance quoted. Annual returns are compounded monthly. Performance between selected dates may be misleading and may not be able to be achieved in the future.

All calculations are based on time-weighted geometrically linked returns. Data for strategies is derived from "model account performance." The selection of "model accounts" is based on the longevity of the account along with identifying those accounts with minimal additions and withdrawals. It is possible that a model account will change based on a number of factors including the termination of the original model account, withdrawals, or a strategy change. For most strategies, model accounts are representative of an account held by a principal of Q3 and custodied at Axos Advisor Services. To the extent that a model account holds any of Q3's proprietary funds, the full management fee of the fund(s) is credited back to the account. On any platform for which fee credits do not occur, actual performance results may be slightly lower than what's illustrated in this report. Q3 may have had a minimal portion of total assets in a particular strategy over certain time periods. Factors that may negatively impact performance expectations include the size of the account, commissions charged and where the account is held. Performance for taxable accounts would be negatively affected had taxes been deducted. As individual account types and tax rates vary, taxes are not considered in the results shown. For illustration purposes, fees are deducted from each quarter end month, while actual advisory fees are deducted approximately two weeks after each quarter end month. Depending on the performance of the model between these two dates, it's possible that the model account achieves a slightly better or worse rate of return, however, such differences are expected to be negligible.

No representation is being made that any client will or is likely to achieve results similar to those presented herein. Algorithms associated with our investment strategies are monitored regularly. While infrequent, Q3 may adjust the algorithm and/ or fund universe of a strategy in an effort to make improvements. This presentation is provided for informational purposes only and there is no assurance objectives will be realized. While fact sheets may provide general investment information from sources deemed reliable it is in no way a solicitation to buy or sell any security. Certain strategies may include an element of discretion, which may result in trades that deviate from signals generated by the model. Q3 may work with unaffiliated third parties in the development and implementation of certain strategies. In such a case, Q3 may rely on data provided by the third-party. While such data is believed to be reliable and accurate, Q3 cannot guarantee that to be the case. There is risk of loss with all of Q3's investment strategies and such strategies may not be suitable for all investors. For a list of all recommendations made in the preceding 12 months please contact our office. No graph, chart, formula, or other device can, in and of itself, be used to determine which securities to buy or sell, or when to buy or sell such securities, or can assist persons in making those decisions. Past performance is not indicative of future results.

Definitions

Alpha: Measures the difference between the investment's returns and expected performance given its level of risk (as measured by beta). A positive alpha indicates the investment has performed better than its beta would predict. A negative alpha indicates the investment has underperformed.

Standard Deviation: Measures the volatility associated with an investment. The higher the figure, the more volatility. If an investment has an annual return of 10% and a standard deviation of 15%, one might conclude the "average range" of the return would be -5% to 25% (10% +/- 15%).

Upside/Downside Deviation: Measures the Standard Deviation of only the up/down periods.

Max Drawdown: Measures the largest negative change in value of an investment, from its highest peak to its lowest valley.

Sharpe Ratio: Also referred to as "risk-adjusted return." It is calculated by subtracting a "risk-free" rate (2%) from the annualized rate of return (of the investment) and then dividing this figure by the standard deviation. The higher the number, the better.

Beta: Measures volatility of an investment in comparison to a benchmark. It can be thought of as the tendency of the investment's returns to respond to swings in the benchmark. A beta of 1 indicates that it should move similar to the benchmark. A positive number less than 1 means it should be less volatile than the benchmark. Greater than 1 means it should be more volatile than the benchmark. A negative beta means that there could be inverse correlation between the investment and the benchmark.

Up/Down Capture Ratio: Measures the relative performance of an investment in up/down periods. For example, an upside ratio of 120% means that the investment returned 120% of the benchmark's return during up periods. Up Ratios of over 100% are desirable, and Down Ratios under 100% are desirable.

Model Account Inception: The date that a model account was first used to generate performance data. In all cases, model account data is reflective of an account held at Axos Advisor Services.
